Keywords: Distance Learning, Preference, Convenience, Information, Technology, And Telecommunications.	

Distance education (Latin "distance" - distance use) is a modern information and telecommunications that allows "distance learning" without direct, personal contact between teacher and student. The use of technology, according to which the educational process is organized using new information technologies, multimedia systems. It ensures the effectiveness of learning in academic disciplines; such as developing cognitive abilities. Computer training is a special type of distance learning. Modern realities require the constant development of man. If another twenty years ago higher education was considered highly privileged and not available to everyone, it is no longer typical for two, three or more diplomas. Implementation of ambitious plans ensures the availability of modern technologies such as distance learning system. Once barriers to the introduction of distance learning have been identified, internal barriers need to be analyzed and carefully assessed. Therefore, the first internal problem that needs to be addressed is the miscalculation of university potential. the university administration needs to assess the opportunities, i.e. see how all types of distance learning contribute to achieving the goal. Today, when the education system of our country is undergoing significant changes, it is gratifying that along with various forms of education, especially distance learning is widely used.

Today, computer and information technologies are rapidly being updated with images, and with development, they are becoming the basis of our daily lives. In particular, in science and technology, manufacturing, banking and the press, radio and television, consumer services, trade, law enforcement, medicine and all other areas, computers are the main tools for workers in this field. 'lib remains. The advent of the Internet in particular is one of these changes. The Internet is a means of transmitting and receiving multimedia data over long distances. News and information about events in one part of the world reach other countries instantly via the Internet. Given the same opportunities, the Internet makes an invaluable contribution to the acceleration of

international cooperation in the political, economic, financial, educational and other spheres.

It is no secret that many people use the Internet only to read the news, search for information, use e-mail or sell rumors. The possibilities of the Internet are growing day by day. Examples include distance learning, e-libraries, telemedicine, tele metrology, e-business, e-shops, and more. Today, development is rapidly evolving and changing. Almost every minute there are changes, updates and surprises in different parts of the planet. Every day is flowing under a strong stream of news. In fact, the majority of applicants who choose distance learning are those who do not want to give up their job, but want to get an education. In online education, you can study on weekends, when you return from work, or even in the middle of the night. It will save you money. The distance learning level for any program can be much cheaper than the regular fee at training centers. Online education is the best way for students looking for cost-effective options. The quality of education is expected to increase as a result of the enrichment of teaching methods in higher education with modern media. In this regard, the distance learning method is especially important for teachers and students, as it has a number of advantages. Technological methods, such as the Internet and multimedia, make it necessary to develop computer programs based on the teaching materials and manuals needed by students. After all, distance learning in any field provides access to the methodological literature of the world's educational centers, the latest and most up-to-date information. Distance learning or regular classroom education is a question that bothers many applicants. Often students are afraid to choose distance learning because they do not clarify the pros and cons of this method of learning. If you want to learn in this way, it is good to understand the advantages and disadvantages of distance learning.

Distance education also saves the time of teachers and creates a wide range of opportunities for independent learning by increasing their financial

interest, depending on the level of opportunity. There is no doubt that the organization of the exchange of achievements in the field of education within the framework of the global education system will ensure the achievement of achievements in this field.

Distance learning poses new challenges for professional educators. This is due to the fact that they are required to supplement their teaching materials, improve their skills with a creative approach and innovation, and align these indicators with the achievements of world science. This method of teaching allows students to work on themselves in accordance with the requirements of education, to strive for more knowledge, to work independently with the computer and to use their knowledge creatively. Methodological publications can be checked and supplemented with tests.

Distance learning has the following advantages:

1. Creative learning environment. There are many ways in which a teacher can teach, and students can only read a given material. On the basis of the proposed distance learning, students themselves search for the necessary information in a computer database and ensure that their experiences communicate well with others and work in their place. Encourages education.
2. Opportunity for independent study. Distance learning includes primary, secondary, tertiary and advanced training. Inspectors with different levels of training can work on their own schedule and interact with students at their level.
3. Big changes in the workplace. Distance learning provides millions of people with the opportunity to learn, regardless of their background. This type of training plays an important role in staff training.
4. A new and effective tool for teaching and learning. Statistics show that distance learning is just as effective as distance learning. In addition, distance learning goes beyond the boundaries set by the university. The advantage of students studying on this basis is that they are provided with the best, quality materials and teachers. Based on the methodology of teaching and management, the teacher should be free from the conditions of teaching in the classroom. The National Program of Personnel Training of the Republic of Uzbekistan, one of the main documents on the reform of the education system in the country, provides information and communication technologies (ICT) for the educational process in educational institutions that meet the requirements of a market economy. The need to organize on the basis of the Internet and computer networks was emphasized. The distance learning system based on modern ICT is one

of the most widely used educational processes in the education system of our country. Distance learning is a new form of teaching, which involves new forms, methods, tools, organization, forms of communication between the teacher and the listener, as well as the interaction of listeners.

In addition, different forms of such education have their own purpose, based on the social order, the content defined in the curriculum of the selected educational institution, as well as the organizational form and special means of teaching methods. Professors of the Department of Foreign Languages of Andijan State Medical Institute for the first time with teachers of the Department of Languages and Educational Technology of the Fergana branch of the Tashkent Medical Academy They conducted practical training among students of medical prophylaxis online. Distance learning was intended for geographically remote schools and academic education. However, the development of modern information and telecommunication technologies has opened the way for the implementation of the educational process from a distance. As a result, distance learning has quickly become another impetus for the use of new teaching methods in higher and secondary special education.

The distance learning system has a number of undeniable advantages over other forms of sustainable education. They include:

- Opportunity to study in a comfortable environment - at home or in the office;
- Individual approach to each student;
- Significant time and effort savings;
- Opportunity to communicate with the teacher - individual interest opportunity to ask questions;
- Individual conditions, taking into account the student's abilities.
