

TEACHER-STUDENT RELATIONSHIPS IN CONTINUOUS EDUCATION SYSTEM

Norboyeva Sarvinoz Mengalievna

Doctoral student of Termiz State University, 2nd stage
Teacher of Termiz State Pedagogical Institute

Article history:	Abstract:
Received: 20 th August 2023 Accepted: 20 th September 2023 Published: 24 th October 2023	In this article, the use of pedagogical principles of the masterpieces of history and culture of the Uzbek people, teacher-mentor activity and the effective organization of national education in the continuous education system in the development of basic spiritual competences in future pedagogues is theoretically analyzed.
Keywords: Education, thinking, tradition, values, culture, spirituality, spirituality, value, principle, talent, development, spiritual competence, etc.	

Society development, without a doubt, education of work quality and efficiency with depends Modern thinking and professional to potential have specialists while his is the support. Of this for valid education content to practice current to do directed technologies continuous by improving to go necessary[6].

Uzbek of the people history and culture masterpieces each aspect, especially pedagogical point of view from the point of view study and analysis reach great important important have " Us always thinking coming again one the important issue is this of our youth manners, behavior, one word with in other words, worldview with depend Today time intensity with is changing. These changes who feels more than anyone else who are young people. Okay, young people own of the era requirements with harmonious let it be But the same at the time don't forget yourself. Who we are, how we are of the nobles our generation invitation their in the heart always echo giving to himself loyal to stay therefore let it stand[7]."

this purpose, to students and young people education to give in the process our culture, our values and national art from samples to use big importance is being given. National tradition and values again decision to find as a result teacher - master activity the future pedagogue personnel in preparation not just the basics of science on the surface knowledge, skill and skills with arming factor, maybe education of the recipient empty the time meaningful organize reach out talent, interest and their aspirations in consideration received without, creative scientific to their research attraction achievement spiritual competencies development and to the profession to direct kaatta attention focus it is necessary[13].

National education people name and his history with closely depends The past cultural and pedagogical

heritage and traditions students-youth upbringing for important tool being service does Continuously education in the system national education efficient organize "Teacher - disciple" traditions important is counted[12].

Master-student traditions in students professional skill develop their spiritual and educational potential increase, independent search, creative approach, one word with so to speak, every don't worry mature person in formation to himself special educational effect showing big importance occupation is enough Another one characteristic aspect that is, from him use as a result education in the receiver own opportunities confidence, the situation top evaluation, self control to do, himself analysis to do and voluntary adjectives is formed, and so on students social activity mentors under control will be[8].

Teachers-mentors the most great duty - to the development of the country his own worthy contribution double understanding, intelligent, understanding and capable disciples from preparation consists of The teacher is the murrabi good student preparation for first of all his himself professional potential, spiritual mature, broad worldly and healthy to the idea have to be it is necessary[11].

To us As you know, mentor-apprenticeship in their traditions teacher not only to his student guide, instruction only by giving no more, own in turn, them independent to the activity prepared and from himself after work experience, knowledge and skills from generation to generation to pass chance created "Master-disciple" relationship certain program, plan based on take going to the goal according to In this regard student with take to go the work in forms teacher to the following compliance to do should:

- to his student educational effect showing time requirements, society to the laws and regulations suitable knowledge with arming;

- the only one to strive towards the goal, work the result see to know to teach;

- of his students to his spirit and spirituality positive effect show get and own instead demanding to be

- himself and others respect to do habituation;

- success looked without to step forward;

- positive reversible contact installation;

- education organize in reaching different different methods, pedagogical technologies and innovation of approaches used without in students spiritual competencies development attention focus[9].

- among students duty, responsibility, responsibility feeling forming to go and etc.

Also teacher-student in their traditions the following pedagogical from principles use important place holds:

- consistency and to systematicity based on without teaching and educate sure makes sense in order have to be

- consciousness and activity, that is occupied by him or this of activity to himself special aspect, essence conscious way complete realize reach, his prospect and development on the way activity with movement to do

- the secrets of science in possession thoroughness;

- education life, life with closely dependence in consideration get

- independent research and creativity abilities in development theory with practice closely dependence account get

- of students and young people age and to himself special features account get

So, continuous education from the tradition of "Master-disciple" in the system use intended the effect gives Pedagogical teaching ideas see practical skill and skills directly exercise, that is certain activity in practice directly by performing is formed. "Master-disciple" tradition while pupils, students-youth and young in pedagogues creative search to the body bringing, pedagogical activity in the process their individual characteristics in consideration received without approach, in the student talent more development for comfortable conditions Create with is important. Like this circumstances in students not only work with work release to the activity responsibility with approach, perhaps others work appreciate, honest work to do, to work efficiency to be proud such as spiritual and moral also develops qualities[10].

Above from thoughts It seems that it is now period the future generation Homeland confidence in development with step by step on the way their spirituality, national identity understanding late can't be necessary from tasks is considered.
